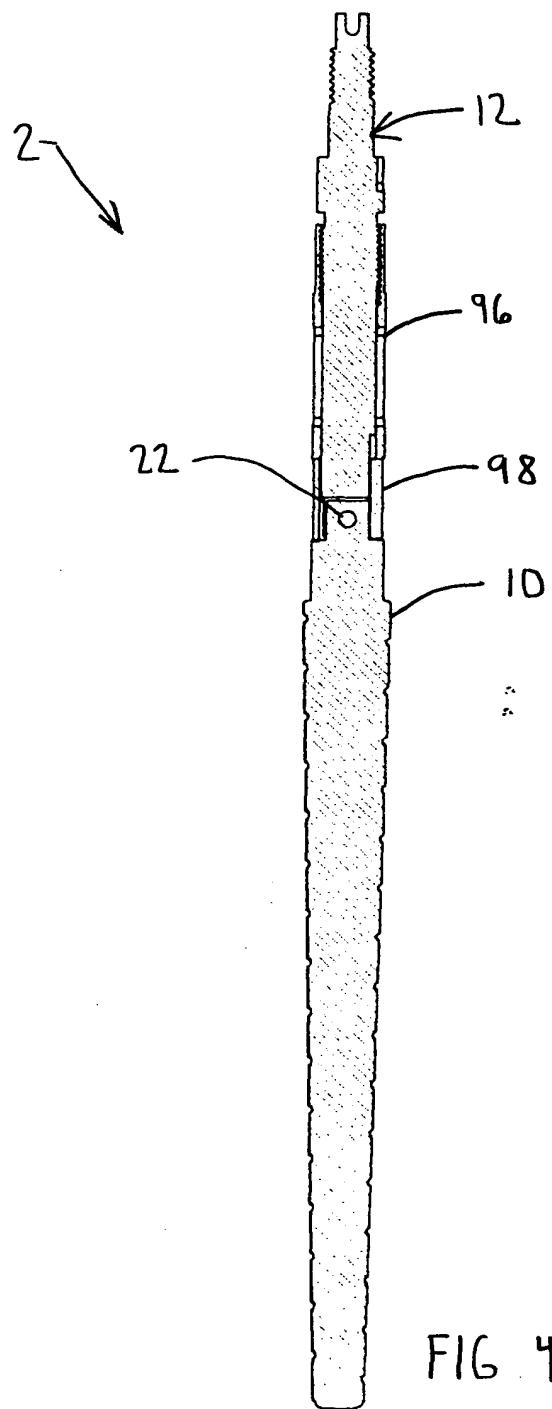

FIG 41

500

502

opening a medullary canal of the long bone

504

providing a reamer including a first member having a first member centerline and a second member having a second member centerline, the first member centerline being movable with respect to the second member centerline, the first member including a surface for the removal of bone

506

positioning the reamer in the canal

508

reaming a cavity in the canal with the reamer with the first member centerline being coincident with the second member centerline

510

adjusting the reamer such that the first member centerline is skewed with respect to the second member centerline
